#### COMMENTS

Applicant refers to the Background section of the Application at page 5, lines 5 - 18.

Here the Background section states: "Some current graphical programming environments provide a node for calling a standard shared library from within a graphical program. In this way, graphical programs can utilize other types of executable code, including code created from a text-based programming language." Applicant provides in this IDS a copy of the "LabVIEW Code Interface Reference Manual" and a portion of the "LabVIEW Function Reference Manual" which describes this prior art operation.

Here the Background section also states: "Previous approaches to enabling graphical programs to be called using shared libraries suffer from various drawbacks. For example, one approach in current use for the Windows platform is to create a DLL that has entry points that call a graphical program indirectly by interfacing with an ActiveX out-of-process server, where this ActiveX server is operable to invoke the desired graphical program. However, calling a graphical program using this method may be inefficient, since a process switch is involved. Also, this approach may require programmers to understand various aspects of the ActiveX framework." Applicant is unaware of any documentation or printed materials that could be provided to the Patent Office regarding these previous approaches. Applicant has included this information in the Background section of the patent application and in the present IDS to comply with full disclosure.
